

# CPM Europe Lineator

Remote Roller  
Adjustment

Optimum Pellet  
Quality

Maximum  
Throughput

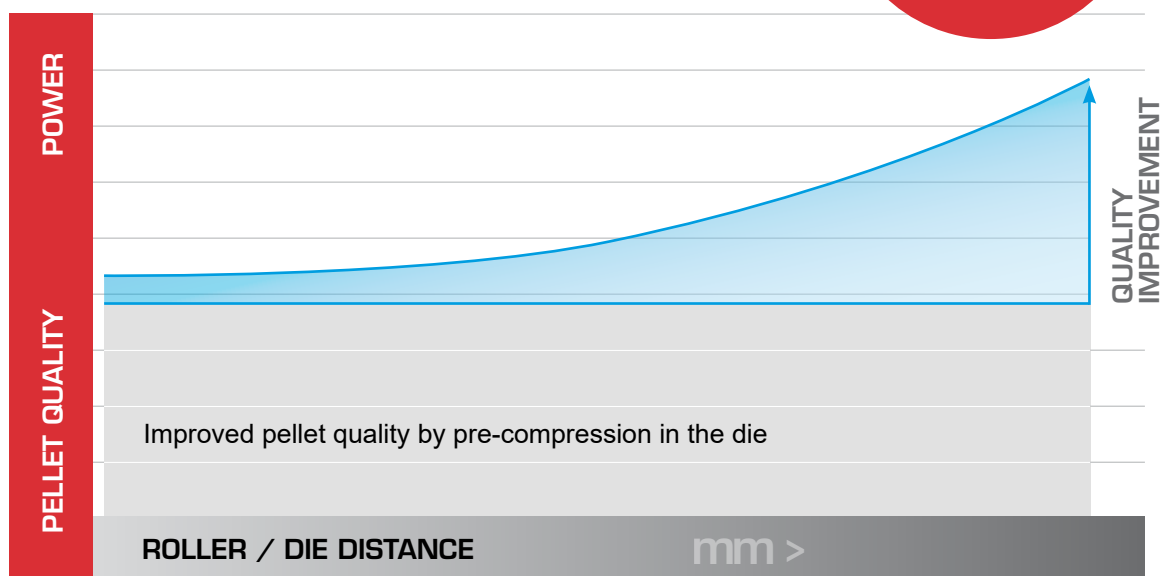

## WHY CPM LINEATOR?

- Easy handling
- Time saving
- Variable die specification
- Safe pelleting operation

UP TO  
20% MORE  
ENERGY IN  
THE PELLETS

ROLLER GAP VERSUS PELLETS QUALITY

CPM Europe. Your Partner in Productivity

# Remote Roller Adjustment

## HOW CPM ADJUST THE ROLLERS WITH THE LINEATOR

### THE LINEATOR

- Increase service life of dies
- Quick disassembly at die and roller change
- Optimum pellet quality by pre compression
- Optimum energy consumption by pre compression
- Reduce operating cost
- Increase safety
- Automatic “zero - positioning” rollers together with RSM

CPM's lineator is a remote controlled roller adjustment system. The compact lineator ensures an operator-safe, precise and quick roller adjustment during pellet mill operation. The Lineator is reducing your operating cost by decreasing valuable production down-time. With the lineator, there is no need to stop the pelleting line for most roller adjustments and down-time is minimized at pellet mill inspections. The operator can easily and safely adjust the rollers via a control panel without opening the pellet mill door. Due to the compact design the die and rollers can easily and quickly be changed. The Lineator does not have any hydraulic components, so there is no possibility of oil contaminating the product, which result in easy maintenance. Because the Lineator allows to adjust the rollers remotely the pellet quality can be influenced and throughput maximized.
